

AutoBackup

The AutoBackup module is used for automatic copying of recorded data on a defined server in the network. Copying is scheduled according to a certain timetable (e.g. daily at 1:00). Therefore the video surveillance system disposes of a nearly unlimited archive.

The software PView AutoBackup is an extension of the control and surveillance software PView.

The AutoBackup module can only be used in conjunction with PView software. An automatic backup at a desired point of time can be set with PView; the data are automatically exported.

Advantages AutoBackup:

- Independent operation
- Supplementary password for users
- Easy user interface
- The large archive is distributed into individual files
- Automatic error correction via archive transmission in the network

Item numbers

- 200.216 (1x licence)
- 200.225 (2x licence)
- 200.226 (4x licence)

This product is only handed over to system integrators who participated in the one-day Dallmeier software training.
