

## SmartGUI

### SmartGUI+Editor advance

The software package contains SmartGUI advance and SmartGUI+Editor advance for creating user interfaces, site plans, symbols or function keys (to be created by the installer). The SmartGUI advance software facilitates operation of the PView software and therefore of the entire video surveillance and enables the user to maintain an overview of several locations, buildings and floors. Amongst others, it offers the possibility of switching relevant cameras from different angles or in subsequent scenes. The new »advance« version provides the user with many other useful features. The SmartGUI advance software can only be used together with PView software and is activated via an activation code on the hardware dongle of PView.

### Item numbers

- 200.235.E (1x licence)
- 200.236.E (2x licence)
- 200.237.E (4x licence)

The participation in our software training course is recommended. Details are available online in our partner forum.
